

First Data FD50

Credit Card Terminal

The First Data FD50 is an affordable IP-based terminal with dial backup and fraud protection security features. The FD50 reliably processes virtually every payment option including credit, debit, EBT, and contactless payments.

The FD50 terminal allows a merchant to accept virtually every payment option, including PIN-secured and signature debit cards and credit cards such as Visa®, MasterCard®, Diners Club International®, American Express®, Discover® Network and JCB.® With the addition of optional peripheral equipment, the FD50 terminal can also accept contactless payments, electronic benefits transfer (EBT) and checks using TeleCheck Electronic Check Acceptance® (ECA®) or paper solutions.

PRODUCT FEATURES

- Rapid transaction processing using IP connectivity with dial backup
- A fast, integrated 2.25" wide thermal printer that speeds through text, bar codes, and graphics to reduce customer wait times
- Compact, small footprint design
- Three-track magnetic stripe card reader with support for contactless payment processing
- 32 MB RAM memory capacity
- 3 USB ports and 1 serial port for peripherals and potential expandability
- Address verification service
- Quick and simple installation
- Six durable screen-accessible keys
- Secure Sockets Layer (SSL) encryption
- Fast, hassle-free drop-in paper-loading

The FD50 terminal reliably processes transactions through an Internet protocol (IP) or dial-up connection. It helps protect customers from fraud and identity theft by truncating customer receipts.
