

PlanetAuthorize™ payment gateway offers free payment modules

Accept credit card and electronic check payments within your favorite CRM tool, Shopping Cart Software, or Retail POS application using a single payment gateway account.

Jacksonville, FL (PRWEB) May 18, 2009 -- PlanetAuthorize™ (<http://www.planetauthorize.com>), a service of SaleManager Merchant Services, announced today the availability of Free payment modules to merchant's who open a PlanetAuthorize payment gateway account. PlanetAuthorize payment modules are available for the leading open source and commercial software products.

The PlanetAuthorize payment gateway service will provide its commercial payment modules, free of charge, to all new PlanetAuthorize payment gateway merchants until July 31, 2009. The enterprise-class PlanetAuthorize platform uses the latest technologies to process and manage credit card, signature check card and e-check payments for all sales channels under a single seamless interface. PlanetAuthorize has reduced the cost of payment processing and increased ROI by allowing merchants to accept and capture electronic payments from multiple point-of-sale channels using a single payment gateway account. Merchants who use the PlanetAuthorize payment gateway service can process customer payments in their retail store, online web store, CRM tool (SugarCRM or vtiger CRM), certified mobile device or call center.

The PlanetAuthorize patent-pending load-balancing system makes it easy for merchants to process transactions using multiple merchant accounts. Now merchants have the ability to process customer payments, from different points-of-sale solutions, using one or many bank issued merchant accounts. Our engineers created a patent-pending load-balancing system that allows merchants to select which bank to use to process and settle different transactions. Unlike other solutions there is no need to open multiple payment gateway accounts.

PlanetAuthorize payment gateway merchants can use our payment modules, free of charge, with the following commercial and open source platforms:

- | | |
|--------------------|---------------------|
| • SugarCRM | vtiger CRM |
| • VirtueMart | Magento Commerce |
